1. **Unified Weekly Overview**
   a. The schedule view should provide a weekly layout that displays each day of the week from Monday to Sunday, with each registered course shown on the appropriate day(s) based on its meeting times.
   b. Each course block should include the following details:
      i. Course Name
      ii. Room Number (pulled from User Story 1)
      iii. Instructor Name (if available)
      iv. Start and End Times
      v. Duration of the class (displayed visually, like a time block that stretches to cover the class duration).
2. **Time-Slot Segmentation**
   a. The weekly schedule should have time slots that divide each day into hour-by-hour segments, allowing students to easily differentiate between classes that meet at different times.
   b. The time slots should allow for overlap, meaning if a student has two classes at the same time on different days, both should be shown side by side or stacked clearly to avoid confusion.
3. **Customizable View Options**
   a. Provide students with the option to toggle between a weekly view and a daily view for their schedule. This allows for more flexibility depending on whether they want a high-level overview or more detail about a specific day.
   b. The daily view should show an expanded, hour-by-hour breakdown of the selected day with more detailed information about each class.
4. **Highlighting Upcoming Classes**
   a. Highlight the next class on the student's schedule (within 24 hours or based on the current day/time) by using a distinct color or visual indicator. This feature helps students easily identify their next commitment and reduces the risk of missing it.
   b. Optionally, allow students to set a reminder/alert for upcoming classes that integrates with a personal calendar or notification system.
